ARCTEON DIGITAL

Arcteon Nexus

Connected business transformation platform

Start with one process

Choose the module your team needs today and connect more as your operations grow.

01 / THE PLATFORM

Five business modules

Use each module on its own or connect it to the others as your needs change.

01 — Document Management

Digitise paper files and access them securely in the cloud. Search by name, date or reference, or use AI to find information faster.

02 — CRM System

Keep customer details and history together. Track enquiries and sales progress, and set reminders to follow up.

03 — Inventory System

Check stock balances, track items coming in and going out, scan barcodes and review stock reports.

04 — E-Commerce Platform

List products online, accept orders around the clock, issue bills and receipts, and connect a secure payment gateway.

05 — Workflow Automation

Use digital forms, route approvals to the right person, notify staff automatically and keep an approval history.

02 / GETTING STARTED

From one workflow to connected operations

Share updates across teams

When modules are connected, information from one step can support the next without teams maintaining separate records.

Discover

Review how your team works and identify the most urgent problem.

Start

Choose the module that addresses that problem and adapt it to your process.

Connect

Link the next workflow when your team is ready to share information across modules.

Grow

Train your team and refine the setup as your needs change.
