PRODUCT OVERVIEW

Streamline End-Point

Software licensing and computer management system.

Simplify management. Improve efficiency.

Achieve optimal performance across daily IT operations.

One platform. Six connected modules.

SEP connects device information, asset records and support tickets.

Endpoint Management

Automatic device data collection and updates.

IT Service Desk

Issue reporting, ticket tracking and SLA alerts.

System Monitoring

Device security status and hardware changes.

Smart Analytics

AI-assisted issue detection and escalation.

IT Asset Management

Endpoints and their connected peripherals.

Workflow Automation

Digital deployment records and approvals.

Better visibility. Less manual work.

Central oversight

Manage endpoints, equipment and support activity in one place.

Live visibility

Review device health, configuration and compliance status.

Less manual work

Automate updates, alerts and approval workflows.

Faster support

Give IT teams the information they need to respond sooner.

MODULE 01

Endpoint Management

Automatic records and a central view of endpoint status.

A central view of your endpoints

Automatic records, live updates and information for operational decisions.

What the module does

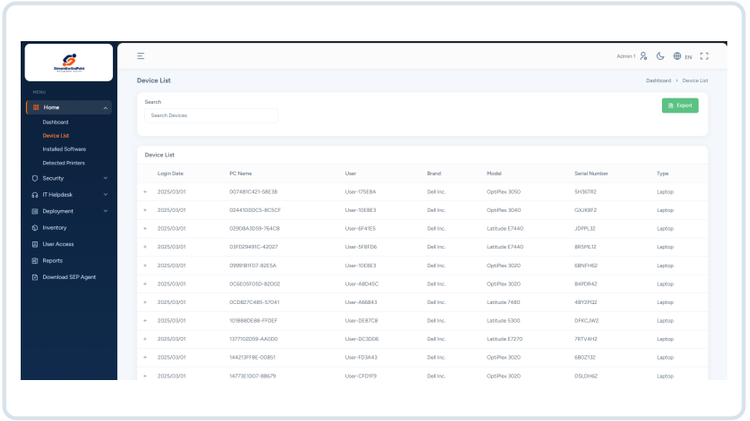

Automatic records and a central view of endpoint status.

Automated data collection

Collect device information in a central repository.

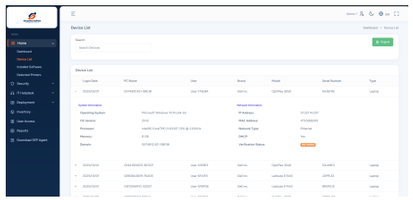

Live endpoint updates

Monitor device status, configuration and potential issues.

SEP system screen from the product presentation

Operational view

Why it matters

Operational benefits

Less manual administration

Reduce time spent tracking and updating device records.

Better decisions

Use live information to prioritise action.

Centralised oversight

Support reporting and audit readiness.

Lower disruption

Proactive maintenance helps reduce downtime and costs.

Let’s discuss your IT operations

Request a quotation or consultation.

MODULE 02

IT Service Desk

Issue reporting and support tracking in one place.

Clearer requests. Faster diagnosis.

Give employees a direct route to support and help IT teams prioritise cases.

What the module does

Issue reporting and support tracking in one place.

Direct issue reporting

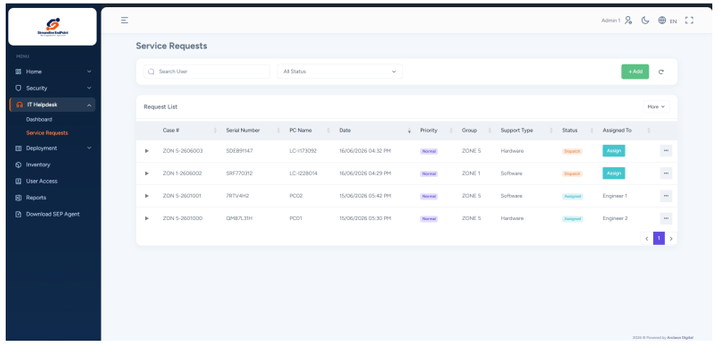

Employees open cases from the SEP agent on their computers.

Screenshots for diagnosis

Attach error screenshots to help IT teams understand the issue.

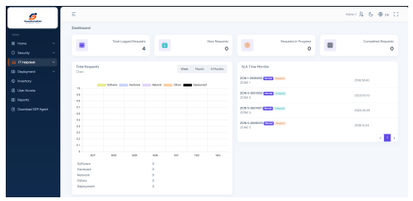

SLA monitoring

Track resolution times and alert teams to overdue tickets.

SEP system screen from the product presentation

Operational view

Why it matters

Operational benefits

Easier reporting

Give employees a clear way to request help.

Faster diagnosis

Provide support teams with useful issue details.

Clear priorities

SLA alerts help teams prioritise critical cases.

Greater transparency

Track support activity and communication centrally.

Let’s discuss your IT operations

Request a quotation or consultation.

MODULE 03

System Monitoring

Visibility into device security and hardware configuration.

Stay informed about device security

Review security status, hardware changes and records for audit reporting.

What the module does

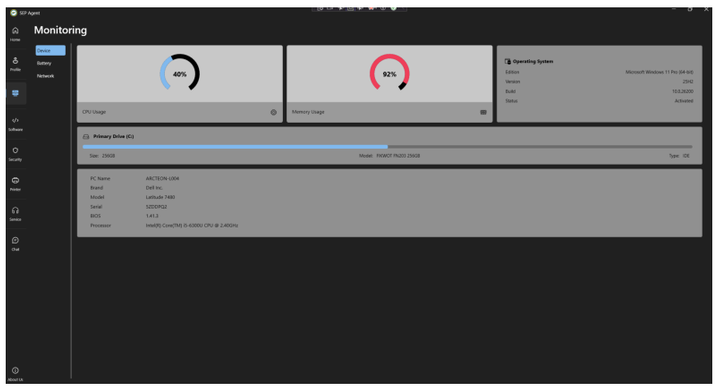

Visibility into device security and hardware configuration.

Security status

Monitor antivirus, system updates, USB policies and drive encryption.

Hardware changes

Track changes to components in registered devices.

SEP system screen from the product presentation

Connected to the SEP platform

This module forms part of the connected capabilities across the IT device lifecycle.

Why it matters

Operational benefits

Stronger oversight

Review device security status continuously.

Earlier action

Identify missed updates and potential risks.

Accurate asset records

Track hardware changes and investigate discrepancies.

Compliance support

Maintain monitoring records for reporting and audits.

Let’s discuss your IT operations

Request a quotation or consultation.

MODULE 04

Smart Analytics

AI-assisted monitoring helps IT teams identify issues sooner.

Identify issues sooner

AI-assisted detection, automatic escalation and configurable monitoring.

What the module does

AI-assisted monitoring helps IT teams identify issues sooner.

Early issue detection

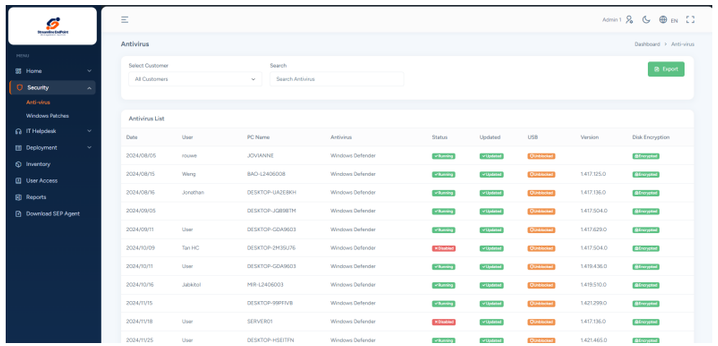

Identify unusual patterns, specification mismatches and agent faults.

Automatic escalation

Create alerts or support tickets for detected issues.

Configurable monitoring

Set rules and alert levels to suit operational needs.

SEP system screen from the product presentation

Connected to the SEP platform

This module forms part of the connected capabilities across the IT device lifecycle.

Why it matters

Operational benefits

Proactive support

Identify and escalate issues sooner.

Less manual monitoring

Give IT teams more time for other priorities.

Improved reliability

Support timely resolution of critical issues.

Relevant alerts

Customise alert types and levels for the organisation.

Let’s discuss your IT operations

Request a quotation or consultation.

MODULE 05

IT Asset Management

A central record of IT equipment and its connected endpoints.

Connected equipment. Clearer accountability.

Keep endpoints and their associated peripherals in a central equipment record.

What the module does

A central record of IT equipment and its connected endpoints.

Peripherals in the inventory

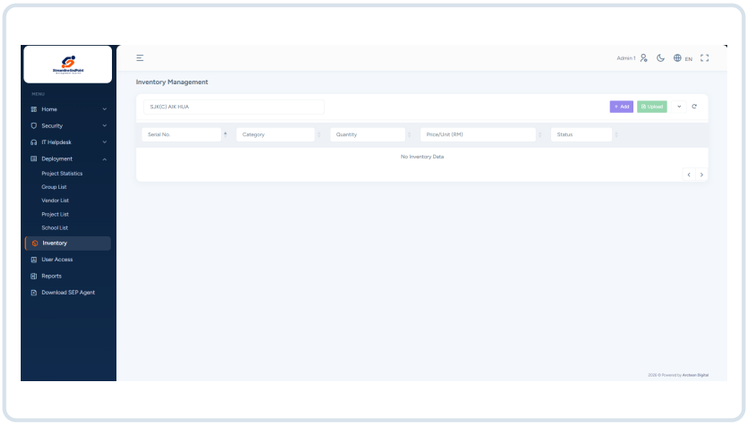

Record printers, scanners and other IT equipment.

Linked device records

Associate peripherals with PCs or laptops using endpoint serial numbers.

Clear equipment relationships

For example, link a printer to the PC that uses it.

SEP system screen from the product presentation

Connected to the SEP platform

This module forms part of the connected capabilities across the IT device lifecycle.

Why it matters

Operational benefits

Clear accountability

Link equipment to its associated endpoint.

Simpler tracking

Group related devices for easier audits and updates.

Inventory visibility

Review equipment records, status and recorded locations.

Coordinated maintenance

Maintain peripherals alongside their connected endpoints.

Let’s discuss your IT operations

Request a quotation or consultation.

MODULE 06

Paperless workflow automation

Digital approvals and automated maintenance checks

Workflow approvals. Traceable records.

Replace printed forms and manual sign-offs with digital records and traceable approvals.

Digital forms and approvals

Workflow Processing with Digital Signature Approval

Customisable forms

Design forms and approval steps around business processes.

Digital sign-off

Capture SAP and UAT approvals with signer verification.

Progress and audit trail

Track approval status and retain the supporting records.

Paperless documentation

Reduce printing, manual filing and repeated follow-ups.

Part of Workflow Automation

Preventive Maintenance

Automated checks before digital approval

01 Run the checklist

A one-click check verifies the required maintenance items.

02 Resolve failed items

If an item fails, approval remains blocked until the requirement is met.

03 Retain the record

Keep maintenance results available for governance and audit.

Verify required checks before allowing approval to proceed.

Let’s discuss your IT operations

Request a quotation or consultation.

WORKFLOW AUTOMATION / DEPLOYMENT

From arrival to project closure

Less manual administration throughout the deployment process.

Automatic recordkeeping

Update device and deployment records with less manual input.

Digital forms and signatures

Capture approvals with a clear record of progress.

Project visibility

View deployment status and download reports from the web portal.

SEP agent device tagging

Device tagging

Tag devices as part of installation and configuration.

Automatic data capture

The SEP agent collects device information and stores it in the backend system.

Deployment checklist

Automated verification

Use the system checklist to confirm that required deployment activities are complete.

Clear completion status

Review checklist results before the next approval step.

Current deployment process

Manual records and signature follow-ups create waiting time.

01 **Receive devices**
Excel register and serial-number scanning

02 **Prepare devices**
Install, configure and update Excel

03 **Prepare documents**
Pack stock. Print labels, DO, SAP and SPP.

04 **Deliver devices**
Deliver equipment and obtain DO/SAP sign-off

05 **Checkout submission**
Verify signatures, stamps and dates

06 **Follow-up sign-off**
Reminders, corrections and PPD/JPN escalation

07 **Onsite support**
Distribute devices. Obtain SPP/UAT sign-off.

08 **Project closure**
Consolidate reports and submit to BPM

Deployment with SEP

Automatic tracking and online approvals reduce repeated administration.

01 **Receive devices**
Register devices. Scan non-PC serial numbers.

02 **Prepare devices**
Install SEP and track progress automatically

03 **Prepare documents**
Generate labels and print the DO only

04 **Deliver devices**
Deliver equipment and obtain DO sign-off

05 **Checkout submission**
Online SAP approval, OTP and automatic reminders

06 **Onsite support**
Automatic tracking and online SPP/UAT approval

07 **Project closure**
Download reports and submit digital records to BPM

Digital approvals include OTP verification, reminders and escalation.
