MODULE 04

Smart Analytics

AI-assisted monitoring helps IT teams identify issues sooner.

Identify issues sooner

AI-assisted detection, automatic escalation and configurable monitoring.

What the module does

AI-assisted monitoring helps IT teams identify issues sooner.

Early issue detection

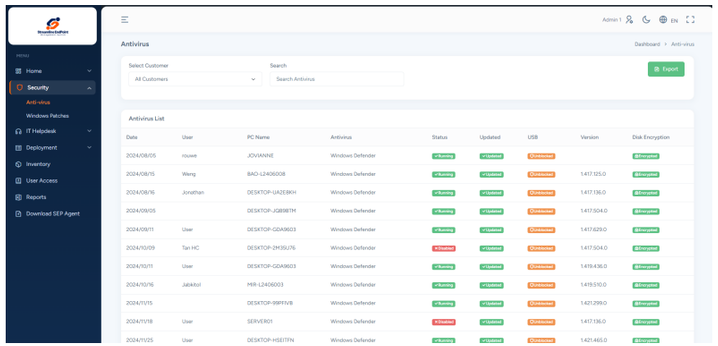

Identify unusual patterns, specification mismatches and agent faults.

Automatic escalation

Create alerts or support tickets for detected issues.

Configurable monitoring

Set rules and alert levels to suit operational needs.

SEP system screen from the product presentation

Connected to the SEP platform

This module forms part of the connected capabilities across the IT device lifecycle.

Why it matters

Operational benefits

Proactive support

Identify and escalate issues sooner.

Less manual monitoring

Give IT teams more time for other priorities.

Improved reliability

Support timely resolution of critical issues.

Relevant alerts

Customise alert types and levels for the organisation.

Let’s discuss your IT operations
