Streamline EndPoint
Management System

# STREAMLINE END-POINT

Simplify Management. Improve Efficiency. Achieve Optimal Performance.

Presented by

ArcteonDigital

MALAYSIA DIGITAL

# One platform for daily IT operations

SEP connects device information, asset records and support tickets.

## Central oversight

Manage endpoints, equipment and support activity in one place.

## Live visibility

Review device health, configuration and compliance status.

## Less manual work

Automate updates, alerts and approval workflows.

## Faster support

Give IT teams the information they need to respond sooner.

# SEP modules

Connected capabilities across the IT device lifecycle

**01 Endpoint Management**

Automatic device data collection and updates.

**02 IT Service Desk**

Issue reporting, ticket tracking and SLA alerts.

**03 System Monitoring**

Device security status and hardware changes.

**04 Smart Analytics**

AI-assisted issue detection and escalation.

**05 IT Asset Management**

Endpoints and their connected peripherals.

**06 Workflow Automation**

Digital deployment records and approvals.

# Endpoint Management

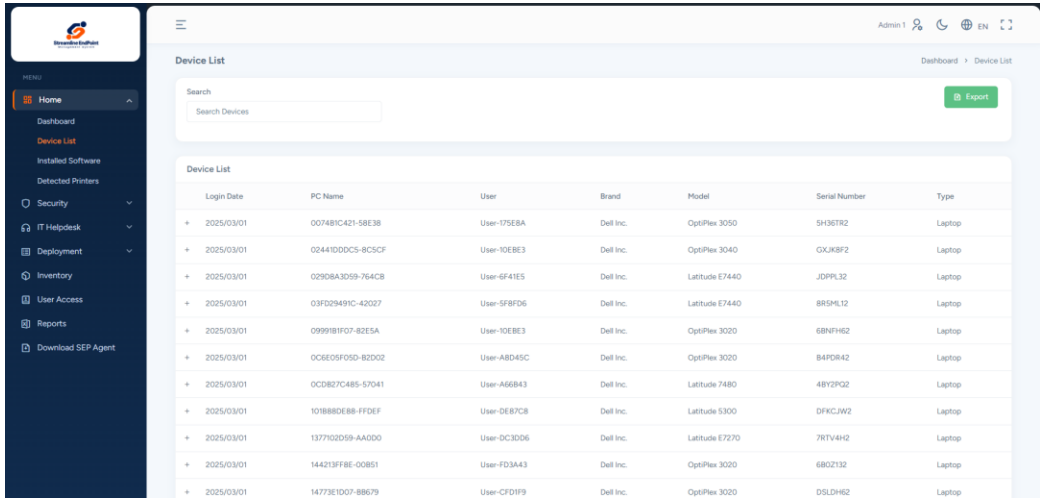

Automatic records and a central view of endpoint status.

## Automated data collection

Collect device information in a central repository.

## Live endpoint updates

Monitor device status, configuration and potential issues.

# Endpoint Management benefits

Operational benefits

## Less manual administration

Reduce time spent tracking and updating device records.

## Better decisions

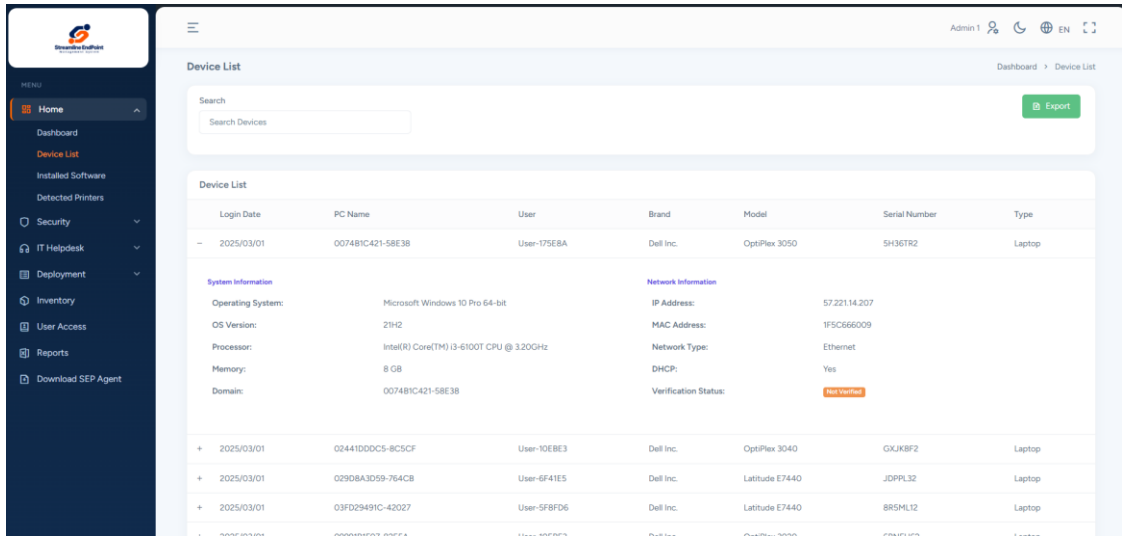

Use live information to prioritise action.

## Centralised oversight

Support reporting and audit readiness.

## Lower disruption

Proactive maintenance helps reduce downtime and costs.

# IT Service Desk

Issue reporting and support tracking in one place.

## Direct issue reporting

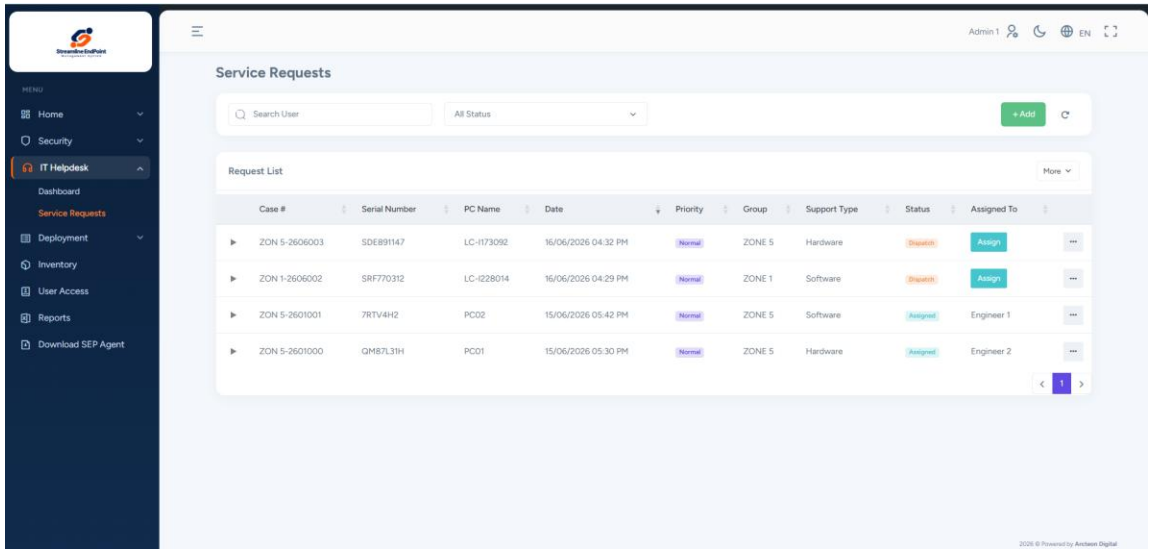

Employees open cases from the SEP agent on their computers.

## Screenshots for diagnosis

Attach error screenshots to help IT teams understand the issue.

## SLA monitoring

Track resolution times and alert teams to overdue tickets.

# IT Service Desk benefits

Operational benefits

## Easier reporting

Give employees a clear way to request help.

## Faster diagnosis

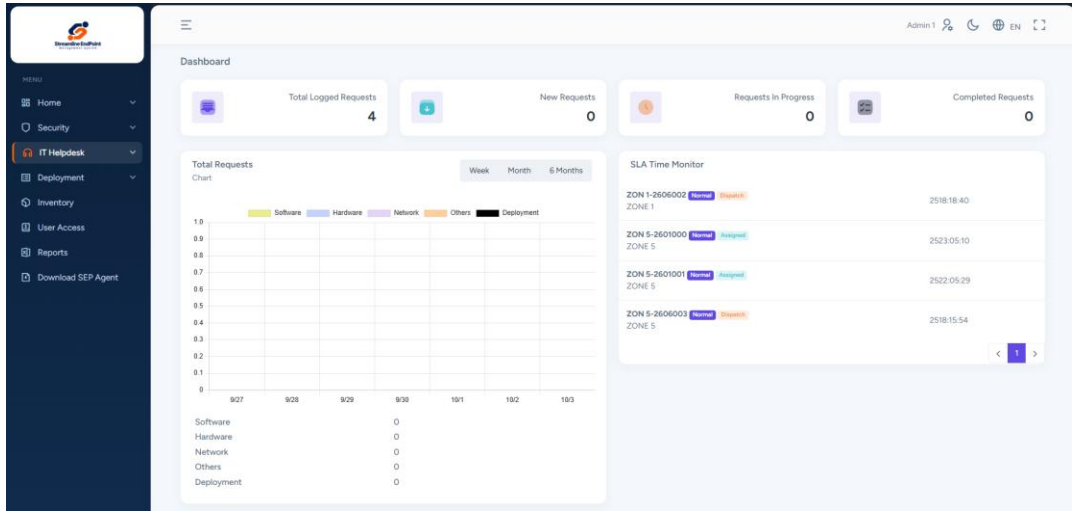

Provide support teams with useful issue details.

## Clear priorities

SLA alerts help teams prioritise critical cases.

## Greater transparency

Track support activity and communication centrally.

# System Monitoring

Visibility into device security and hardware configuration.

## Security status

Monitor antivirus, system updates, USB policies and drive encryption.

## Hardware changes

Track changes to components in registered devices.

# System Monitoring benefits

Operational benefits

## Stronger oversight

Review device security status continuously.

## Earlier action

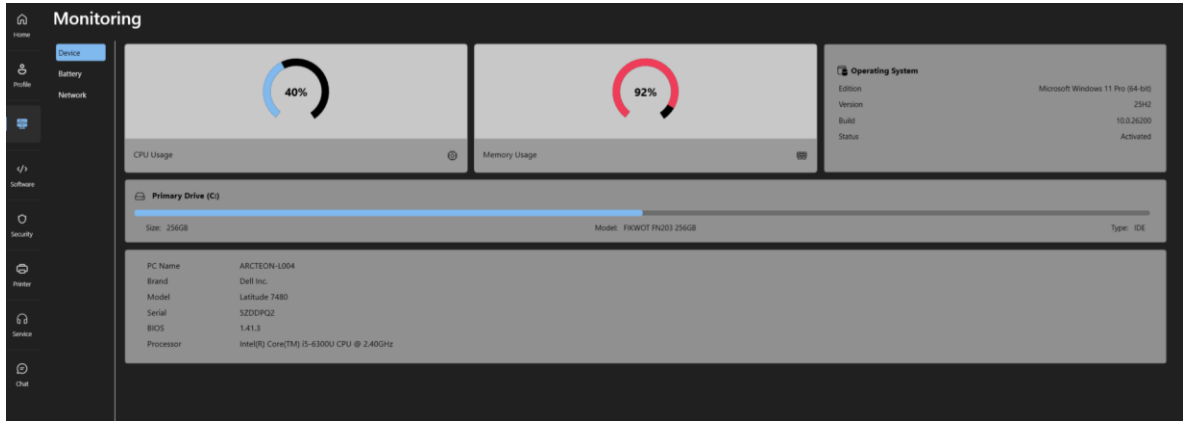

Identify missed updates and potential risks.

## Accurate asset records

Track hardware changes and investigate discrepancies.

## Compliance support

Maintain monitoring records for reporting and audits.

# Smart Analytics

AI-assisted monitoring helps IT teams identify issues sooner.

### Early issue detection

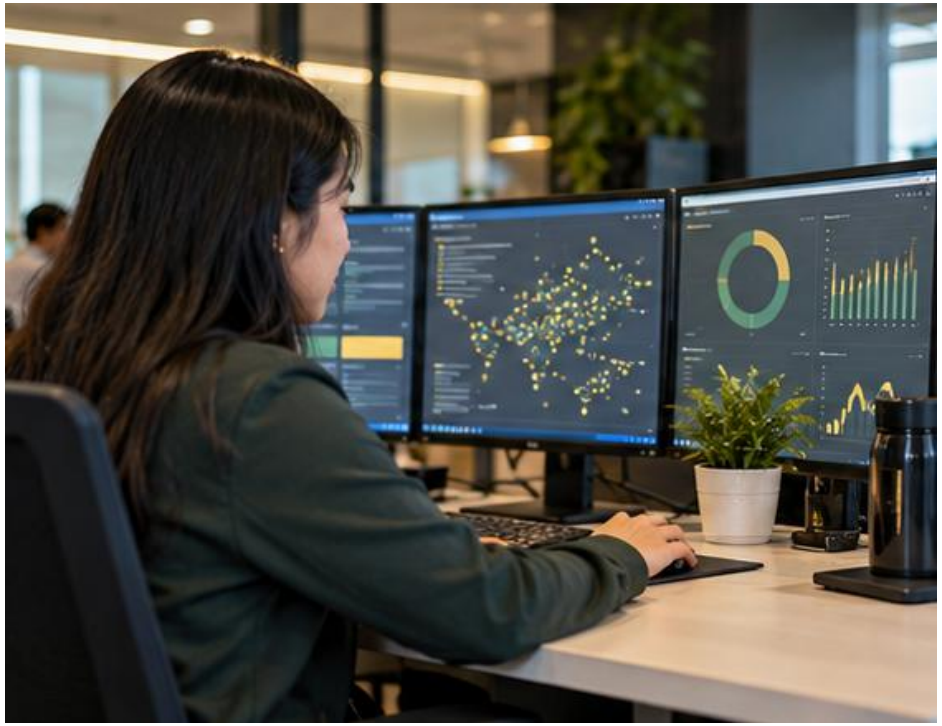

Identify unusual patterns, specification mismatches and agent faults.

### Automatic escalation

Create alerts or support tickets for detected issues.

### Configurable monitoring

Set rules and alert levels to suit operational needs.

# Smart Analytics benefits

Operational benefits

## Proactive support

Identify and escalate issues sooner.

## Less manual monitoring

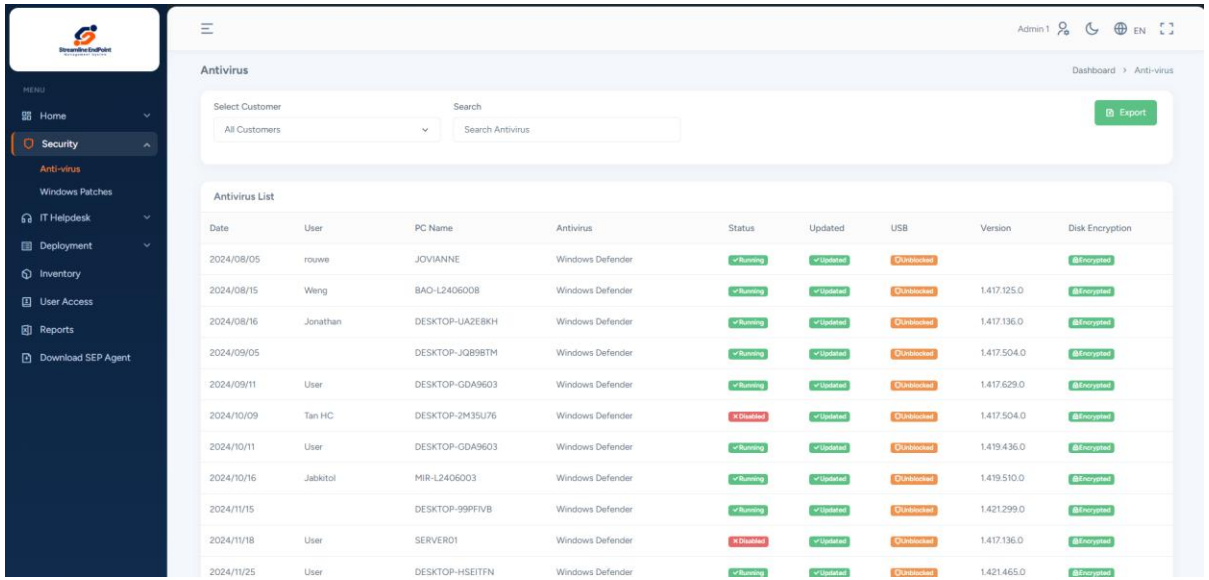

Give IT teams more time for other priorities.

## Improved reliability

Support timely resolution of critical issues.

## Relevant alerts

Customise alert types and levels for the organisation.

# IT Asset Management

A central record of IT equipment and its connected endpoints.

## Peripherals in the inventory

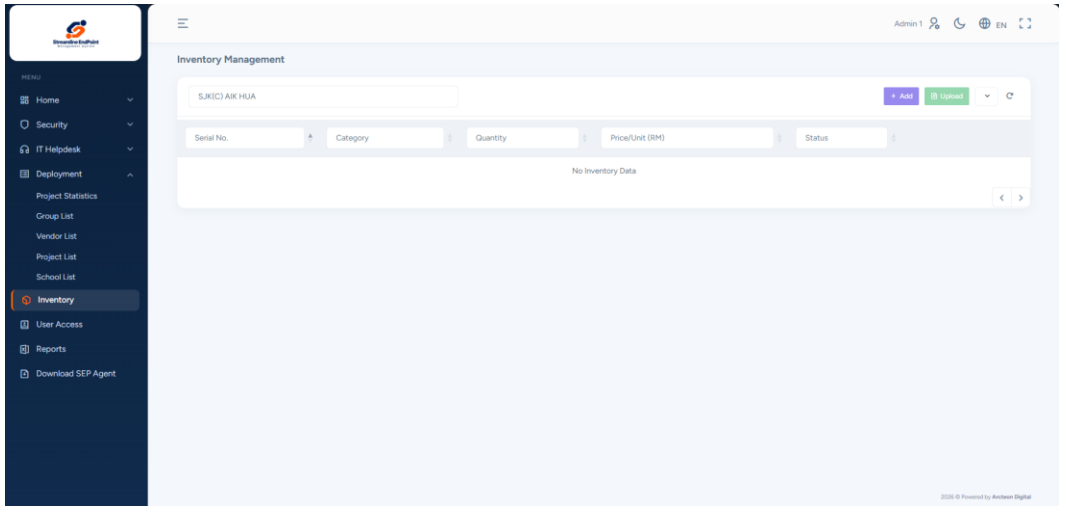

Record printers, scanners and other IT equipment.

## Linked device records

Associate peripherals with PCs or laptops using endpoint serial numbers.

## Clear equipment relationships

For example, link a printer to the PC that uses it.

# IT Asset Management benefits

Operational benefits

## Clear accountability

Link equipment to its associated endpoint.

## Simpler tracking

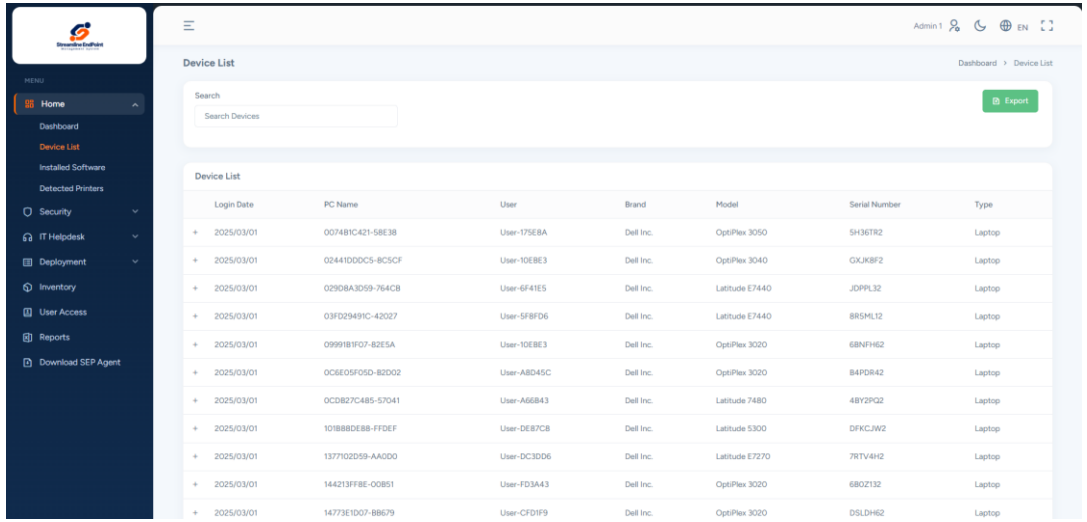

Group related devices for easier audits and updates.

## Inventory visibility

Review equipment records, status and recorded locations.

## Coordinated maintenance

Maintain peripherals alongside their connected endpoints.

# Paperless operations

Digital approvals and automated maintenance checks

## Workflow approvals

Replace printed forms and manual sign-offs with digital records and traceable approvals.

## Preventive maintenance

Verify required checks before allowing approval to proceed.

# Digital forms and approvals

Workflow Processing with Digital Signature Approval

## Customisable forms

Design forms and approval steps around business processes.

## Digital sign-off

Capture SAP and UAT approvals with signer verification.

## Progress and audit trail

Track approval status and retain the supporting records.

## Paperless documentation

Reduce printing, manual filing and repeated follow-ups.

# Preventive Maintenance

Automated checks before digital approval

**01** **Run the checklist**

A one-click check verifies the required maintenance items.

**02** **Resolve failed items**

If an item fails, approval remains blocked until the requirement is met.

**03** **Retain the record**

Keep maintenance results available for governance and audit.

# IT device deployment

Less manual administration throughout the deployment process.

## Automatic recordkeeping

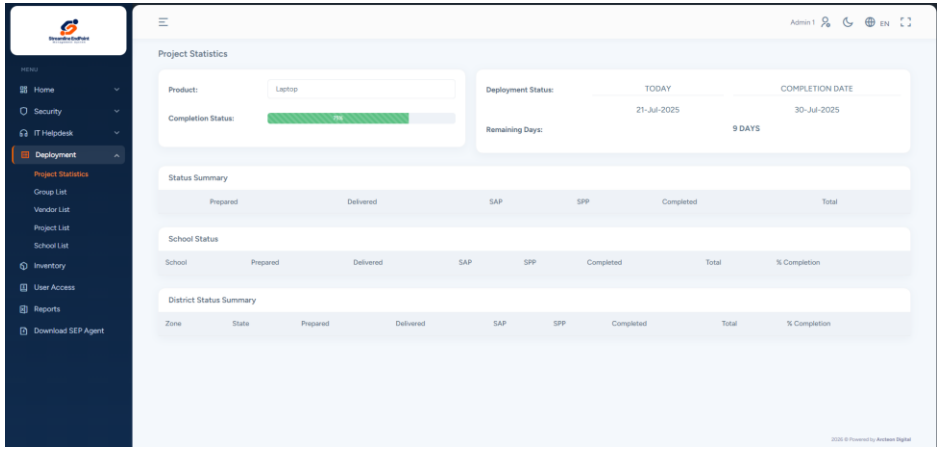

Update device and deployment records with less manual input.

## Digital forms and signatures

Capture approvals with a clear record of progress.

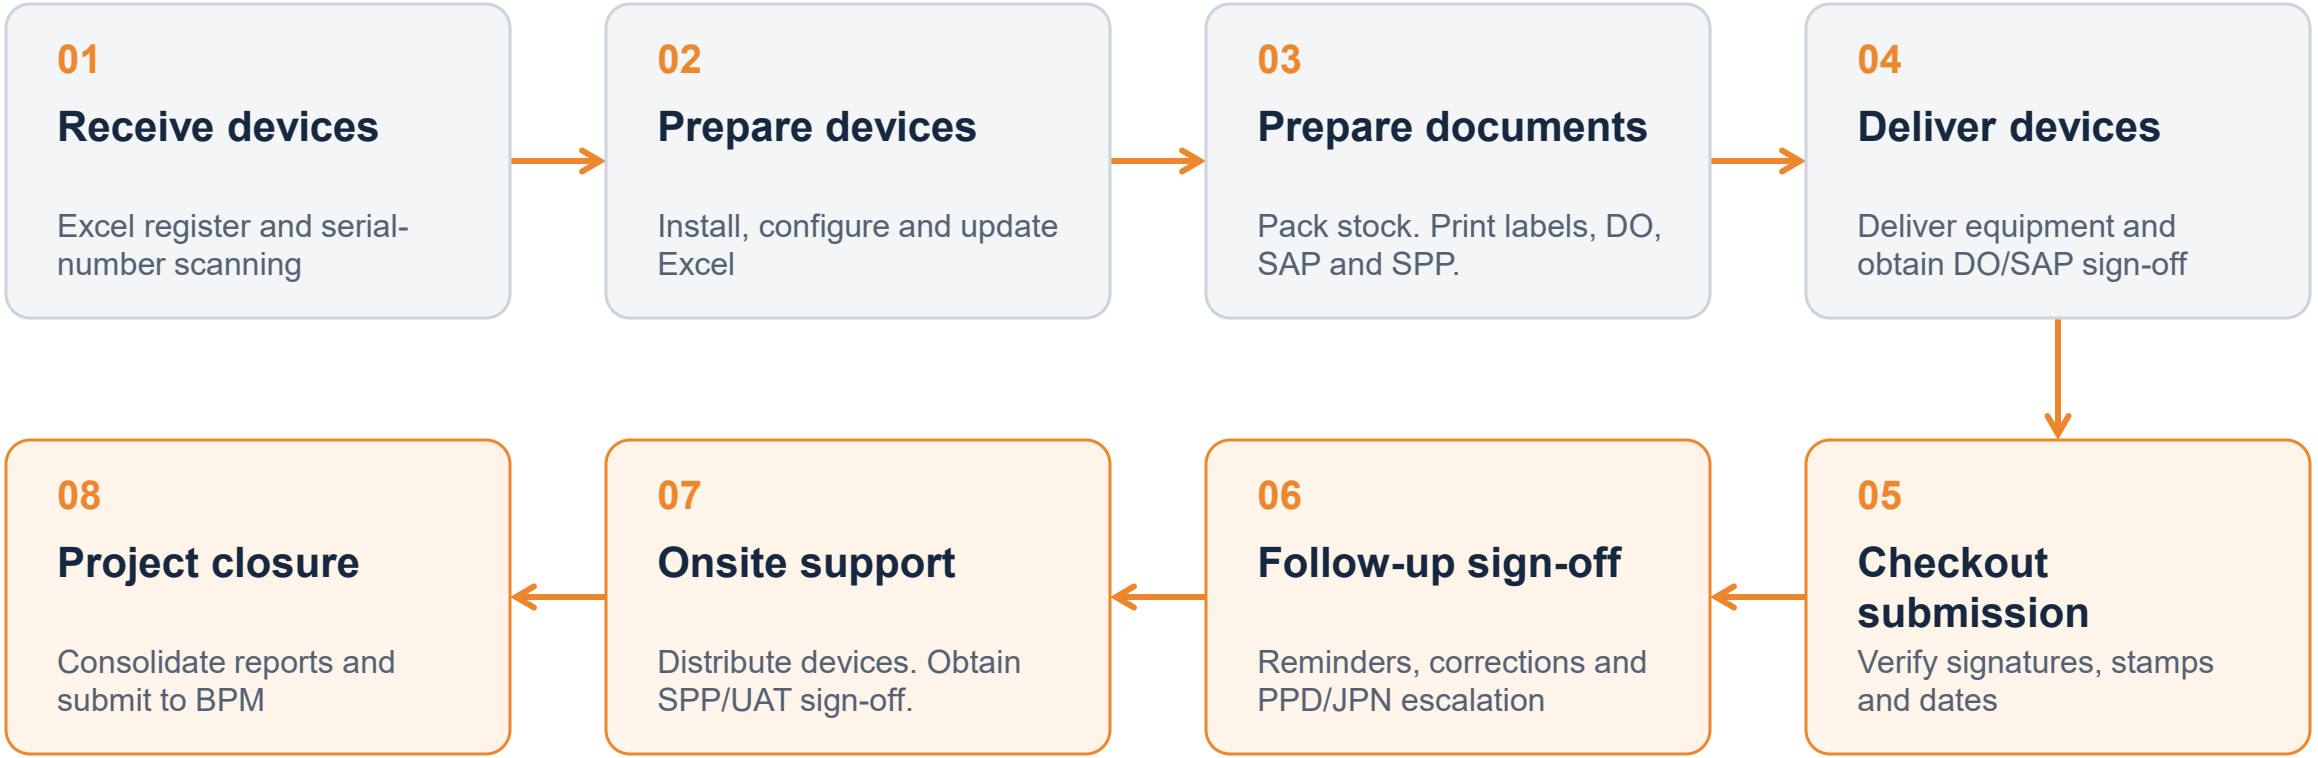

## Project visibility

View deployment status and download reports from the web portal.

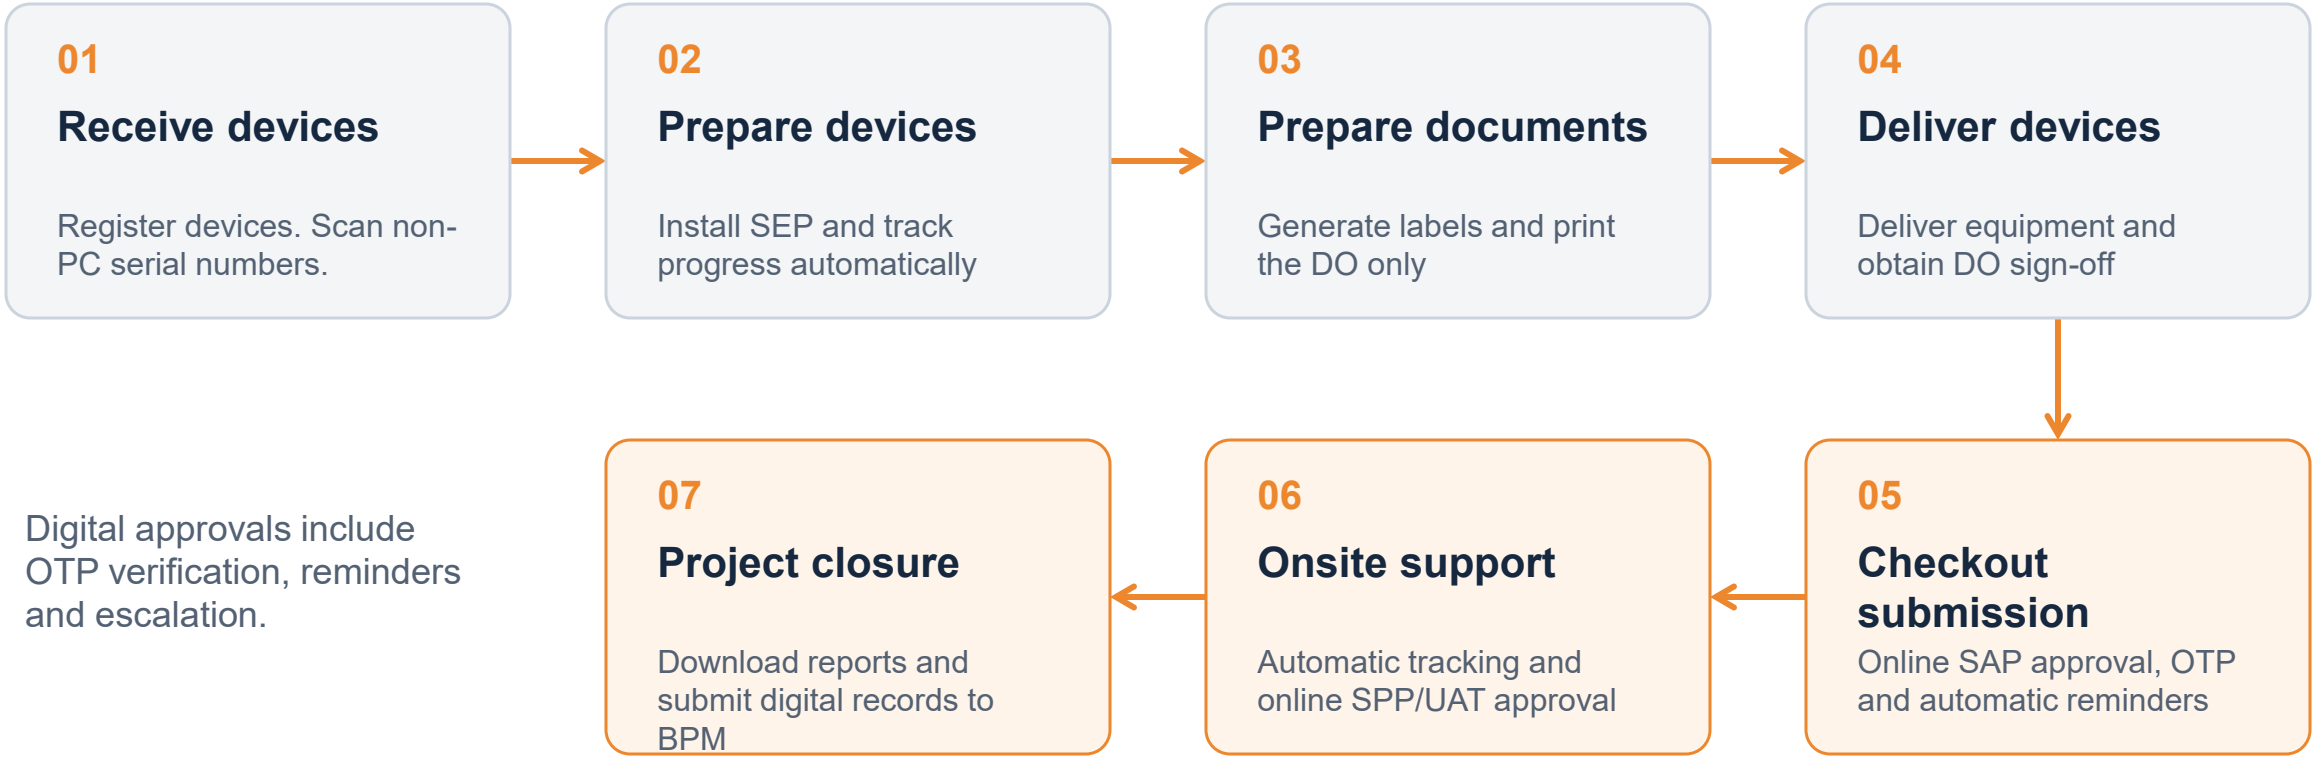

# Current deployment process

Manual records and signature follow-ups create waiting time.

# Deployment with SEP

Automatic tracking and online approvals reduce repeated administration.

Digital approvals include OTP verification, reminders and escalation.

# SEP agent device tagging

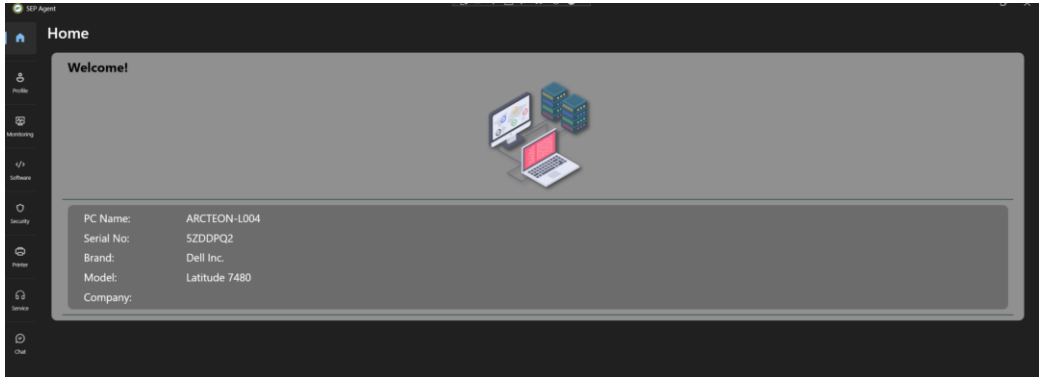

Device records begin during installation and setup.

## Device tagging

Tag devices as part of installation and configuration.

## Automatic data capture

The SEP agent collects device information and stores it in the backend system.

# Deployment checklist

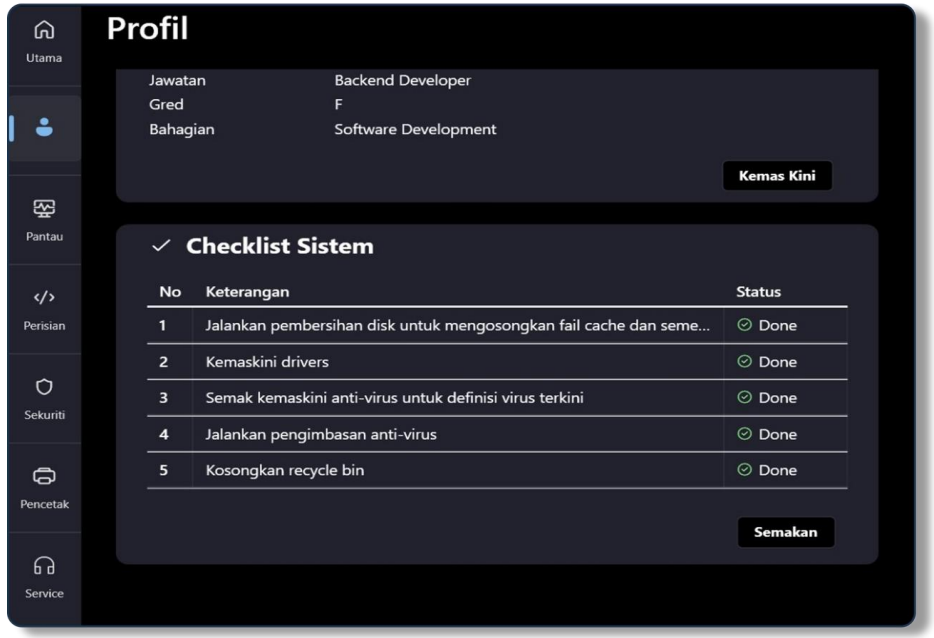

A consistent check of required items and activities.

## Automated verification

Use the system checklist to confirm that required deployment activities are complete.

## Clear completion status

Review checklist results before the next approval step.
